KAIF ANIS SAYED

DATA ANALYST

United Arab Emirates | +971 52 738 3781 | thekaif.uae@gmail.com | Portfolio | LinkedIn | GitHub

ABOUT ME

Evidence-driven Data Analyst with hands-on experience analyzing business, marketing, and operational datasets using SQL, Python, and Power BI. Experienced in funnel analysis, statistical modeling, machine learning, and KPI development to uncover performance drivers and operational risks. Proven ability to automate reporting systems, build executive dashboards, and translate complex datasets into actionable insights that support data-driven business decisions.

Core Competencies: Data Analysis • SQL • Python • Power BI • Machine Learning • Funnel Analysis • KPI Development • Statistical Modeling • Data Visualization • Business Analytics

SKILLS

Programming & Querying

Python (Pandas, NumPy, Matplotlib, Seaborn) • SQL / MySQL

Visualization & Reporting

Power BI (DAX, KPI Dashboards, Drill-downs) • Excel (Advanced Formulas, Automation, Power Query)

Analytics & Modeling

Exploratory Data Analysis • Funnel Analysis • Statistical Modeling • Hypothesis Testing • Machine Learning • Sentiment Analysis • KPI Development

Tools & Workflow

Jupyter Notebook • VS Code • GitHub • Data Cleaning • Feature Engineering • Data Modeling

EXPERIENCE

House of Panache UAE— Marketing & Business Data Analyst (Remote) — Sept 2025 - Feb 2026

• Generated **3,000+ B2B outreach opportunitie**s by executing d**ata-driven email campaigns (100+ targeted emails daily)** and conducting **A/B testing**, optimizing **lead acquisition efficiency**.

• Analyzed **email engagement metrics** and **campaign performance data**, identifying **outreach patterns that improved targeting and response consistency**.

• Built **digital presence across 4 social platforms** and developed **company website**, supporting **inbound lead capture** and **marketing visibility through data-driven content strategies.**

Zabrlabs — Data Analytics & Business Intelligence — May 2024 - Jul 2025

• Automated **8+ recurring MIS and reporting workflows** by building **Excel automation (macros, Power Query, advanced formulas)**, reducing manual reporting workload by ~90% and saving **~25+ hours per month**.

• Analyzed **500K+ rows of business and marketing datasets** using **Python (Pandas, NumPy)** to clean and consolidate **multi-source data**, reducing **data preparation time by ~70%** and improving **reporting accuracy**.

• Built **6+ interactive Power BI dashboards** visualizing **10+ business KPIs**, enabling stakeholders to identify **performance trends and insights up to 4× faster.**

PROJECTS

Customer Churn Prediction & Risk Segmentation — Telecom Analytics | SQL, Python, ML, Power BI — GitHub

Objective: Analyzed telecom customer lifecycle data to identify churn drivers and build predictive retention insights.

• Analyzed **7,000+ customer records** using **SQL extraction and Python EDA**, identifying **~26–27% churn** and revealing **month-to-month plans driving ~1.4× higher churn risk.**

• Developed **Random Forest churn prediction model** using **Python (Scikit-Learn)**, achieving **~80% accuracy** and flagging **~15–20% high-risk customers**, estimating **~5–8% potential churn reduction** through targeted retention strategies.

Vendor Profitability & Dependency Risk Analysis — Retail Procurement Analytics | SQL, Python, Power BI — GitHub

Objective: Evaluated vendor profitability and procurement dependency to support strategic purchasing decisions.

• Developed **SQL ETL pipeline** integrating **6 procurement and inventory datasets** and conducted **Python EDA and statistical testing**, identifying **72% cost reduction from bulk purchasing** and **65% purchase dependency on top vendors.**

• Built **Power BI dashboard** visualizing **supplier margins and inventory risk**, identifying **$2.7M unsold inventory** and enabling **vendor diversification and pricing optimization** insights.

Customer Funnel & Sentiment Analysis — E-Commerce Marketing Analytics | SQL, Python, NLP, Power BI — GitHub

Objective: Evaluated marketing funnel performance and customer feedback to improve conversion efficiency.

• Analyzed **end-to-end marketing funnel** using **SQL**, identifying **conversion fluctuation**s **from 4.3% to 18.5%** and uncovering **product-driven spike**s including **150% seasonal conversion increases**.

• Conducted **Python NLP sentiment analysis** on **357+ customer reviews**, quantifying **275 positive vs 82 negative** sentiments and recommending improvements to increase **customer satisfaction beyond 4.0 rating**s.

EDUCATION

B.S.C COMPUTER SCIENCE

University of Mumbai
